ACC Parentage

Amber Chemical Company, known as ACC, is a wholly owned subsidiary of Caledonia Investments PLC. Based in the City of London, it has a Market Capitalisation exceeding £900 million. Caledonia Investments PLC has a history of long-term investment in a wide variety of industrial and service related companies throughout the world. Their goal of long-term sustainable growth is achieved by combining investment within existing companies, together with new strategic acquisitions designed to create new opportunities. Caledonia Investments PLC has been behind ACC from its conception.

ACC Manufacturing

Manufacturing is centred on six sites, three in the USA and three in Europe. These six sites specialise within specific technologies whilst keeping the needs of the local market to the forefront. Manufacturing capabilities are designed to be responsive to our customers' requirements with a strong emphasis on flexibility which enables ACC to meet the changing demands of the modern production environment.

ACC Technologies

In recent years, ACC have concentrated on silicone chemistry building on the success of Ambersil Silicones (now ACC Silicones Ltd). Following a focused R&D programme and the acquisition of Treco (Milan), Taylor Chemical (now Siovation) Atlanta, Quantum Silicones (Richmond) and Reactamine (Lawrenceville) it now has the following silicone expertise:

- 1-Part RTV - Acetoxy, Alkoxy, Acetone, Oxime
- 2-Part Condensation cure
- 1 & 2-Part Addition cure
- Silicone Gel
- Conformal Coatings - PU, Acrylic and Silicone
- Antifoams & Emulsions
- Thermally conductive materials
- Silicone Modified Organics

ACC also manufactures and markets:

- High purity Electrochemicals - water and solvent based
- Maintenance chemicals - lubricants, greases, cleaners, degreasers, janitorial
- Protective coatings for construction - polyureas, epoxies and other hybrids
- Automotive Chemicals - Traffic film removers, polish, dressings, degreasers

ACC Technical Support

Silicone research and development is a key focus for the ACC chemists, some having worked for over 30 years inside silicone chemistry. The R&D units within the individual ACC companies have their own particular area of technical expertise. These technical teams work very closely with customers, developing tailor-made products and solutions. With a broader knowledge base, the other manufacturing companies employ chemists and technicians developing a wide range of chemical formulations within their own specialist area. Stringent QA systems operated by quality minded personnel ensure the products meet the highest specifications and expectations of our customers.

Application focused technical teams combined with flexible production units provide rapid development and delivery of bespoke solutions

ACC Aims and Philosophy

The ACC Group has a core goal of developing diverse niche markets that require a detailed technical understanding of the specialist application needs. To satisfy these needs and gain that understanding, all ACC personnel are encouraged to be imaginative, flexible, responsive, reliable and committed. Long-term goals lay at the heart of long-term successful relationships with our employees, distributors and customers.

ACC is one of the world's leading independent silicone compounders dedicated to developing silicone technology that will meet the manufacturing demands of today and tomorrow.
